

AI Engineer Developer Intern - Technical Assessment Assignments

Assignment 1: AI-Powered FAQ Assistant

Objective

Build a simple AI-powered chatbot that answers user questions and stores conversation history.

Requirements

- Frontend: React.js or Next.js
- Backend: Node.js + Express.js
- Database: MongoDB
- AI Integration: OpenAI, Gemini, Claude, or OpenRouter

Features

1. User can enter a question.
2. Backend sends the question to an AI model.
3. AI response is displayed in a chat interface.
4. Store question, answer, and timestamp in MongoDB.
5. Create an API to fetch previous conversations.

Deliverables

- GitHub Repository
- README with setup instructions
- Screenshots or short demo video

Bonus

- Conversation search
- Dark mode
- Streaming AI responses
- Docker setup

Evaluation Criteria

- JavaScript Fundamentals
- Next.js Knowledge (State Management)
- Node.js & Express.js Development
- MongoDB Usage (Optimization & Queries)
- AI Integration
- Code Quality & Structure
- Error Handling
- Documentation
- Problem-Solving Approach

Time Limit

Expected completion time: 4-6 Hours.

Note

Candidates may use AI tools (ChatGPT, Gemini, Claude, etc.) for assistance. However, they should be able to explain their implementation and architectural decisions during the interview.
